LYNWOOD BORDER LEICESTERS

This season's rams display the balance, structure and consistency we strive for at Lynwood Border Leicesters. We use the following selection criteria to assist us to meet our breeding objectives.

Raw Data Measurements: These measurements assist buyers in the selection of rams as indicators of potential carcass shape and muscling in their progeny. We analyse and compare these measurements to maintain consistency and ensure continuous improvement year on year.

Visual Selection: We place an emphasis on the physical traits of our rams such as sound structure, balance and confirmation.

Pedigree Data: We have extensive pedigree and breeding data on all our stud sheep paying particular attention to our stud ewe base. We use this reference data when selecting sires at joining to unlock their genetic potential in future progeny.

Each ram was individually scanned and weighed by Trevor Pearce Scanning Services on 24 September 2025. These measurements are noted in the catalogue as Yearling Weight (YWT), Muscle Depth (YEMD), and Fat Score (YCF).

Ram Husbandry

- Rams have been vet checked by Wellington Veterinary Surgery prior to sale day
